Algorithmic Fairness | Ethical AI | Machine Learning | AI Explainability | Computational Social Science

Education

Northeastern University *Boston, MA*
Ph.D. student in Computer Science *2019 – Present*
Indian Institute of Technology (IIT) Kharagpur *Kharagpur, India*
B.Tech. in Chemical Engineering, M.Tech in Financial Engineering, Minor in Computer Science *2014 – 2019*

Experience

Fiddler Labs *Palo Alto, California*
Research Intern *Oct 2020 – Jan 2021*
· Quantifying and explaining distributional shifts in Machine Learning model outputs due to temporal shifts in the model's input features and to use this understanding to determine the consistency of the model's behavior across protected features to prevent bias.

Northeastern University *Boston, MA*
Research Assistant at Khoury College of Computer Sciences | Advisors: Alan Mislove, Christo Wilson *Sep 2019 – Present*
· Collaborating with PyMetrics, a talent matching software, to audit their end to end pipeline to discover and fix racial and gender biases in their recommendation algorithm. Press Release.
· Analysing *Fair* ranking systems that have been published in CS literature and showing how they break down in the presence of noisy protected attribute data, to show the theoretical bounds of fairness in such cases.
· Investigated Facebook's Special Audiences system for opportunity advertisements and showed that the audience creation algorithm was still biased against women, old people and minorites. Covered in the media by Propublica and Mother Jones.
· Analysed the ad reach and spend information obtained from Facebook's ad transparency feature and the personal targeting dataset from Propublica's Facebook ad dataset and showed that advertisers with higher budgets use more privacy sensitive targeting techniques like PII or Lookalike audiences. Findings published and presented at IEEE ConPro 2019.

LIG, University of Grenoble Alps *Grenoble, France*
Visiting Researcher | Advisor: Oana Goga *May 2019 – July 2019*
· Study of how news companies promote different items on social media, investigating possible patterns of differential information spreading using both posts and ads. We also discovered and reported an exposed access token bug to Facebook Bug Bounty.

Xerox Research Centre *Bangalore, India*
Research Intern *May 2017 – July 2017*
· Implemented XTrack, a Smart Vehicle Tracking and Battery usage minimizing Algorithm, using BLE to distribute GPS information.
· Proposed a method for Uber-like Surge Price Prediction using Spatio-Temporal techniques like the Neural Hawkes and Recurrent Marked Temporal Point Process. Awarded the title of Best Internship Project.

Google Summer of Code *Remote*
GSoC Student at OpenMRS *Apr 2016 – Aug 2016*
· Replaced the HTML XForms system used with native generated forms using the Forms REST Api in the android client of the Opensource Medical Record System. Added offline form saving. Configured Travis CI to automatically build and push the apk to play store.
· Overall, contributed 100K lines of code and became the top code contributor in the project repository.

IIT Kharagpur *Kharagpur, India*
Undergraduate Researcher | Advisors: Niloy Ganguly, Saptarshi Ghosh – CNERG Lab *2014 – 2019*
· Automated Extraction of Catchwords from Legal Documents using a novel NER based tagger to help categorize lengthy legal texts.
· Automatically position user comments against relevant news article paragraphs. Presented at ECIR 2019.
· Savitr – A realtime location extraction system for disaster management using twitter. Presented at WWW-SMERP 2018.

Awards & Grants

2019	**Winner**, Best Poster Award	*ECIR'19*
2019	**Winner**, Institute Order of Merit – Technology	*IIT Kharagpur*
2018	**Winner**, SGSIS Institute Challenge Grant – Worth INR 1 Million	*IIT Kharagpur*

Skills

Languages	Python, Java, C, R, Bash, SQL, HTML/CSS, JavaScript, Matlab
Frameworks	Git, Travis, Keras, TensorFlow, Docker, Google Cloud ML/AI, Android
